# SCOPE OF THE METHOD

The Method relates to	Human health
The Method is situated in	Basic Research
Type of method	ln vitro - Ex vivo
Specify the type of cells/tissues/organs	intestine, liver, immune cells

#### DESCRIPTION

#### Method keywords

bioavailability digestion intestine food bioactives toxins epithelial barrier function

#### Scientific area keywords

bioaccessibility bioavailability food effect of food matrix on availability of compounds cytotoxicity digestion

## Method description

A set of protocols to combine the widely used Caco-2 cell line with digests from *in vitro* digestion models (small intestine, colon) to study toxicity, intestinal barrier integrity, bioavailability and, when combined with other cell models (immune, liver, endothelium), bioactivity of food related bioactives and contaminants.

## Lab equipment

- Cell culture facilities;
- Trans-epithelial electrical resistance measurements;
- Fluorescence plate reader;
- Advanced analytical techniques.

## Method status

History of use Published in peer reviewed journal

# **PROS, CONS & FUTURE POTENTIAL**

## Advantages

- Includes relevant food and digestive matrices;
- Barrier and transport assays combined.

# Challenges

- Case-per-case optimization;
- Toxicity.
