Organisation

Name of the organisation Université Libre de Bruxelles (ULB)

Department IRIBHM

Country Belgium

SCOPE OF THE METHOD

The Method relates to	Animal health
The Method is situated in	Basic Research
Type of method	In vitro - Ex vivo
Species from which cells/tissues/organs are derived	mouse
Type of cells/tissues/organs	Intestinal stem cells

DESCRIPTION

Method keywords

Cold atmospheric plasma

gut organoids

cytotoxicity

apoptosis

reactive oxygen species

transcriptomics

epithelium

Scientific area keywords

Gastro-enterology

Method description

Using the *ex vivo* culture system, we investigated the impact of an endoscopic helium plasma jet application on mouse ISCs at the morphological, cellular and transcriptomic levels. Moreover, we explored the potential selectivity of CAP application on tumor versus normal organoids originating from the same genetic background.

Method status
