DESCRIPTION

Method keywords

- veterinary medicine
- dummy
- simulator
- skillslab training
- bandaging

Scientific area keywords
Veterinary education
clinical training

Method description
In the skillslab, dummy models and simulators are used for teaching various clinical skills. The veterinarians in training need to learn how to perform different bandaging techniques in small and large animals. Although training on living animals is important, a part of the training process can be performed on dummy models and simulators in the skillslab. Different equine and canine models and limbs are used to exercise different bandaging techniques.

Lab equipment
° Equine models or manikins (commercial: https://www.vetsimulators.com/-https://koeierij.nl/)
° Canine/feline models: different commercial stuffed toy dogs

Method status
History of use
Internally validated

PROS, CONS & FUTURE POTENTIAL

Advantages
The use of educational animal models in a skillslab offers a number of significant advantages:
° Reduced use of laboratory animals and reduced discomfort for patients, as procedures can be practised on dummy models and simulators before performing them on a live animal.
° Teaching of clinical skills in a quiet and safe environment, reducing anxiety and stress for the veterinary student.
° Complex practical skills can be split into a number of small steps when practising them in the skillslab.

Challenges
High cost of models, clinical training on live animals needed as well.

**Modifications**

Further optimalisation of home-made models and purchasing available commercial models. Virtual/augmented reality can be added.

**Future & Other applications**

Training for lab animal handling/procedures.
