DESCRIPTION

Method keywords

veterinary medicine
dummy
skillslab training
injection techniques
catheterisation

Scientific area keywords
Veterinary education
clinical training

**Method description**

In the skillslab, dummy models and simulators are used for teaching various clinical skills. The veterinarians in training need to learn how to administer intramuscular, subcutaneous, intradermal and intravenous injections to different animal species. Furthermore, they need to learn intravenous catheter placement and infusion techniques. An important part of this training process can be performed on dummy models and simulators in the skillslab.

**Lab equipment**

Commercial dummies:
- silicone dog and cat manikins (for intramuscular injection) (http://www.paws2claws.com/)
- stuffed toy dogs and cats (for subcutaneous injection)
- canine cephalic vein model (for intravenous injection and catheterisation) (https://www.formafundo.nl/)
- pig model for intradermal injection

Home-made dummies:
- small breed canine cephalic vein model
- canine jugular vein model
- equine and bovine jugular vein model
- model for chipping of a puppy

**Method status**

History of use
Internally validated

**PROS, CONS & FUTURE POTENTIAL**

**Advantages**

The use of educational animal models in a skillslab offers a number of significant
advantages:
- Reduced use of laboratory animals and reduced discomfort for patients, as procedures can be practised on dummy models and simulators before performing them on a live animal.
- Teaching of clinical skills in a quiet and safe environment, reducing anxiety and stress for the veterinary student.
- Complex practical skills can be split into a number of small steps when practising them in the skillslab.

Challenges
High cost of models, clinical training on live animals needed as well. Creating and repairing the home-made models is time consuming for a large group of students.

Modifications
Further optimalisation of home-made models and purchasing available commercial models.

Future & Other applications
Training for lab animal surgical procedures.
