

Cerebellar brain slice model

Created on: 14-08-2019 - Last modified on: 08-11-2019

SCOPE OF THE METHOD

The Method relates to	Animal health, Human health
The Method is situated in	Basic Research
Type of method	In vitro - Ex vivo
This method makes use of	Animal derived cells / tissues / organs
Species from which cells/tissues/organs are derived	Mus Musculus
Type of cells/tissues/organs	Brain (cerebellum)

DESCRIPTION

Method keywords

brainslices

cell culture

isolation

mouse

Scientific area keywords

basic research

fundamental research

neuroscience

myelin

Method description

This method describes the steps from a living mouse to a multi-cellular brain slice model where complex cellular interactions can be evaluated.

Lab equipment

Method status

Still in development

PROS, CONS & FUTURE POTENTIAL

Advantages

By maintaining brain morphology and ultrastructurally the brain cells present, a complex multicellular system is being formed where the interplay between different cells can be evaluated to identify novel remyelinating therapeutics, targets,...

Challenges

Inter-species differences ;

Terminal experiment for the lab animal ;

Requires a training period due to the susceptibility of the brain slices to cell death.
