

In vivo infections using the greater wax moth, *Galleria mellonella*

Commonly used acronym: Galleria infections

Created on: 14-05-2020 - Last modified on: 19-05-2020

SCOPE OF THE METHOD

The Method relates to	Animal health, Environment, Human health
The Method is situated in	Basic Research, Translational - Applied Research
Type of method	In vivo
This method makes use of	Animal derived cells / tissues / organs
Used species	The greater wax moth, <i>Galleria mellonella</i>
Targeted organ system or type of research	Virulence assays, pathogenicity and drug discovery

DESCRIPTION

Method keywords

Galleria mellonella

in vivo

Innate immune system

drug screening

Virulence assays

Systemic infections

professional phagocytes

cytotoxicity assay

Needle and bacterial inoculum
host-pathogen interactions

Scientific area keywords

drug screening
Virulence potential
Pathogenicity
Host-pathogen interactions
Infection models

Method description

A calculated number of bacteria is injected through the pro-legs of the larvae. As several entry points are present, this allows to inject virulent bacteria and potential antimicrobial compounds within the same host. The survival of the larvae is scored over time (days post inoculation) until about 10 days. The intoxicated larvae die and become black, rendering the observed lethality obvious.

Lab equipment

- Needles and syringes,
- Glass petri plates,
- Basic microbiology equipment to cultivate the bug of interest.

Method status

Internally validated
Published in peer reviewed journal

PROS, CONS & FUTURE POTENTIAL

Advantages

- Cheap,
- Flexible,
- Easy,
- *In vivo*,
- Medium to high throughput,

- No ethical issues,
- Innate immune system close to human,
- Possibility of several injections (bacteria and compound),
- Adapted for drug screening *in vivo*,
- Excellent cytotoxicity assay for novel compounds,
- No need to feed/water them,
- Calibrated larvae, antibiotic free, are easy to order and can be kept 2 weeks at 15°C.

Challenges

- Still an infection model,
- Absence of the adaptive immune system.
