DESCRIPTION

Method keywords
megakaryocyte
platelet
bone marrow
differentiation

Scientific area keywords

thrombocytopenia
platelet production
megakaryopoiesis

Method description

*In vitro* differentiation of hematopoietic stem cells (HSC) or inducible pluripotent stem cells (IPS) to megakaryocytes and platelets using specific differentiation conditions (liquid and 3D media). CRISPR/cas mutagenesis of HSC or IPS to study the effect of gene depletion or specific mutants on megakaryopoiesis and the production of platelets.

Lab equipment

- Cell culture equipment;
- FACS;
- Amaxa nucleotransfector;
- Cell culture reagents and specific cytokines;
- Molecular reagents and technologies.

Method status

Still in development
Internally validated
Published in peer reviewed journal
PROS, CONS & FUTURE POTENTIAL

Advantages

Reduces the need for producing KO mice or other functional mice studies.

Challenges

Impossible to generate high numbers of platelets that have the same characteristics as blood platelets.

Modifications

Other groups are working on improving the capacity of platelet generation (for transfusion purposes).
